

## Before shoppers think it - we find it!

Before shoppers finish typing a product name, *Celebros AutoComplete finds it for them*, popping up a list of frequent queries and suggested products from your catalogue. Finding a product was never so easy!

*Make your Search-Box Interact!* AutoComplete makes searching a different experience. Your search will now be positioned at the front line of modern search-engines!

### AutoComplete never stops learning.

Built on proven search technology, AutoComplete is adapted specifically for your sites' products and shoppers; its results are based on the history of their frequent queries combined with the first letter of each product listed in your product catalogue. It is constantly being updated by real-time data from Celebros Analytics - both related to the products themselves as well as to past shoppers' reactions to AutoComplete suggestions.

The criteria for choosing the suggested products can vary and is based upon your preference - by clicks, CTR, purchases, views or any weighted combination. Clicking on just one letter brings up an entire list of relevant options! Additionally, images are displayed for the products included in the suggestion list, improving the chances of conversion as well as boosting product recognition.

Efficient, intelligent, quick to respond - Celebros AutoComplete enhances and reinforces your search & navigation options in order to improve your shoppers' online retail experience and increase sales revenues.
